blaugelb Programming Cable

Convenient end position setting and control of the functions already possible during installation.

Product features:

The blaugelb Programming Cable can easily and conveniently set the end positions of the blaugelb Roller Shutter Motors of the ELECTRONIC series at the push of a button and, if necessary, also carry out a subsequent end position setting when the roller shutter box is already closed, without having to open the roller shutter box.

- Convenient setting aid for professional and fast programming of the motors

- Simple and fast end position setting at the push of a button on the programming cable

- Ready for immediate use – ready to plug in thanks to protective contact plug (Schuko type)

- Fast motor connection via integrated WAGO terminals

Programming Cable
Convenient end position setting and control of the functions already possible during installation.
